ROADMAP FY26–FY27

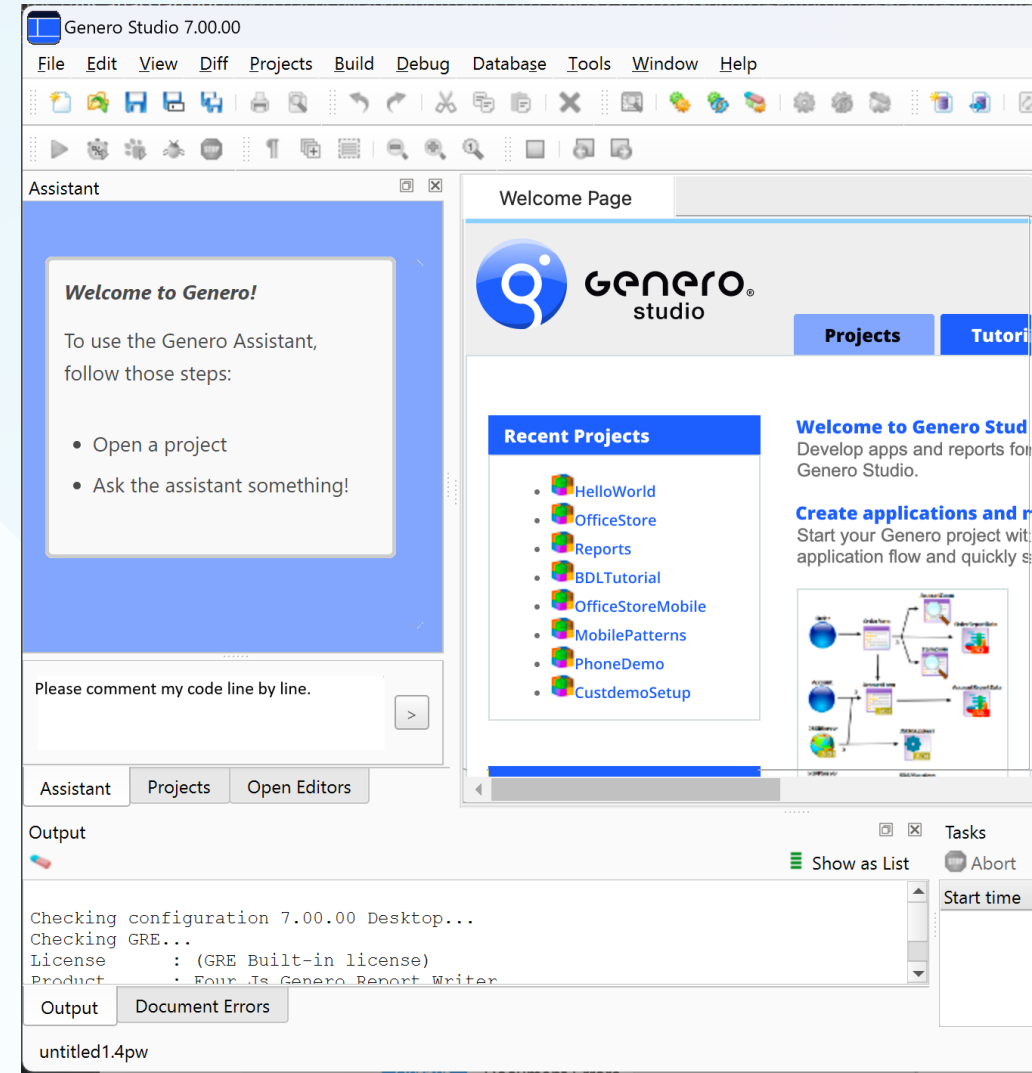

Genero Intelligence for Developers

Genero Studio becomes smart and integrates a **Chat Assistant** which:

- Generates code from specs
- Generates tests
- Fixes bugs
- Comments code
- Describes code
- Answers your Genero related questions
- ...

Available as well from VS Code plug-in

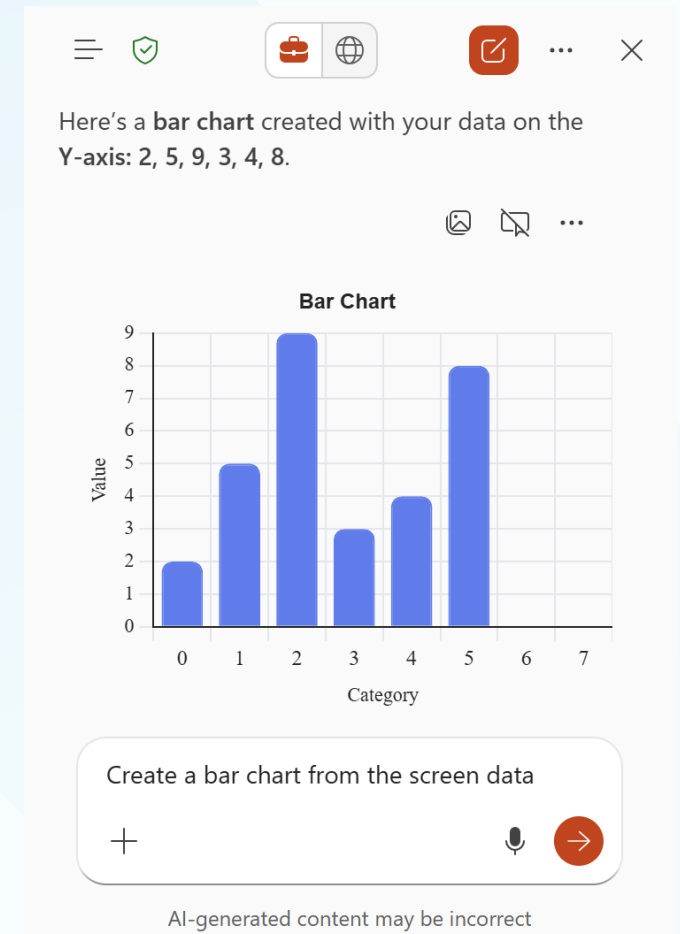

Genero Intelligence for End-Users

Genero Applications come out-of-the-box with a **conversational** user interface.

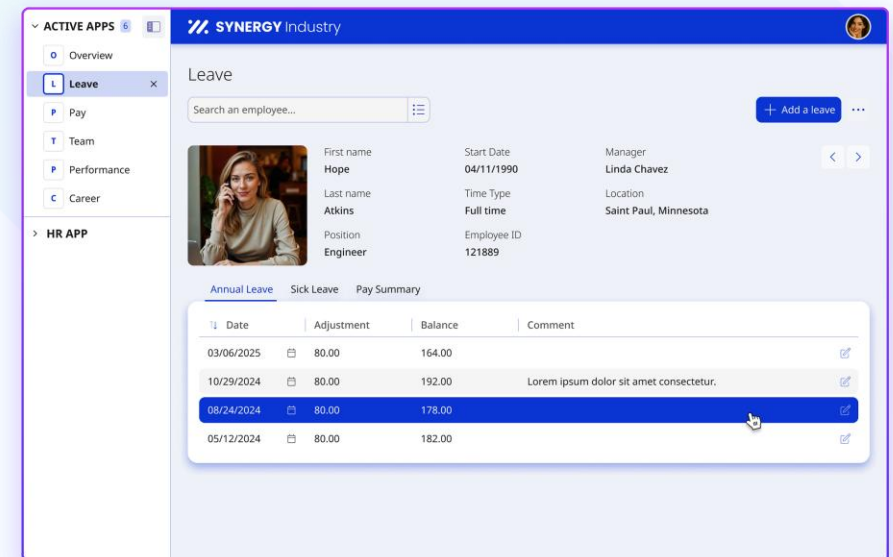

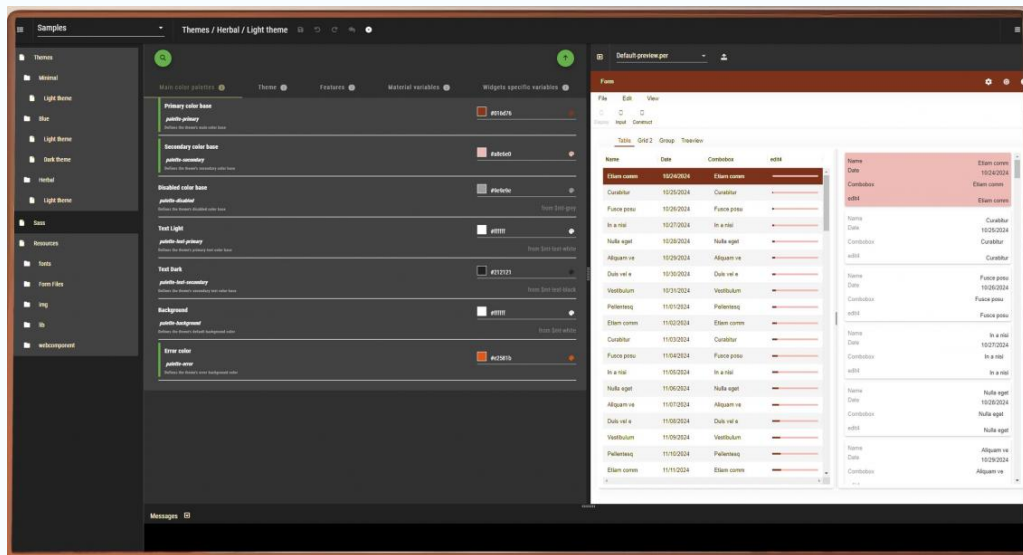

In addition to classic UX, end-user interacts with data with **chat or voice**:

- Search, enter or summarize screen data
- Run actions or start apps
- Display as charts or tables...
- Interacts with web services to fetch or write data
- Gets information from application docs

Theme customizer

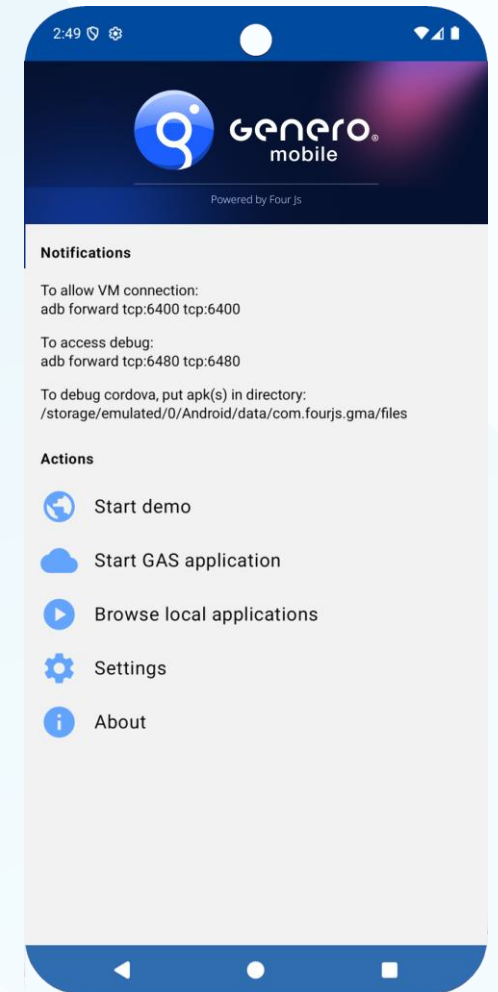

Genero Theme Customizer is a SaaS for UX/UI designers to tailor Genero User Interfaces to match **company branding guidelines**. It hides the complexity of the underlying framework and tools to provide an easy to customize UI with **instant preview**.

GUI / UX

Genero GUI refresh continues with the objective to provide amazing GUIs for desktop and mobile as a default. It combines:

- **Advanced theming** capabilities available from Genero Theme Customizer
- **New default themes**
- **Responsive** enhancements for improved rendering on small devices and better UX on touch devices
- New and enhanced **widgets**

Accessibility

Make application accessible following the
WCAG – Web Content Accessibility Guidelines

Cognitive &
Learning Disabilities

Blindness,
Low Vision,
Color-blindness

Speech Inputs

Hearing
Impairment

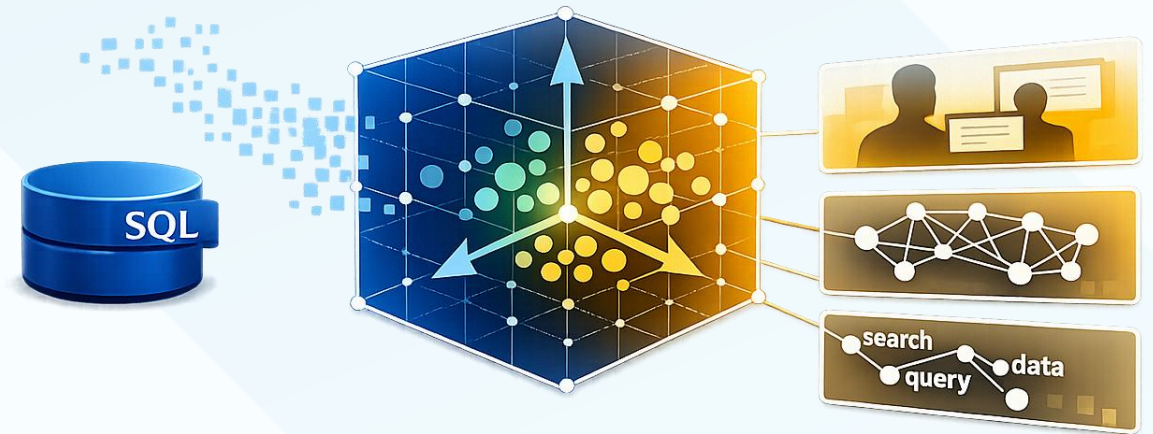

Motor & Dexterity

Databases & Vector types support

Support upcoming databases versions

- SQL Server 2025
- MySQL 9
- PostgreSQL 19
- ...

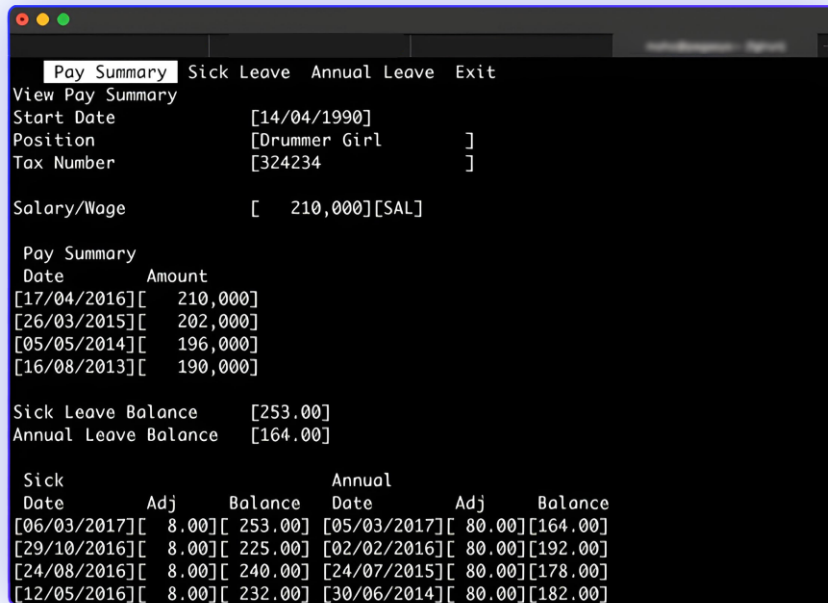

Add support for **Vector types**
for data search by meaning and similarity

Traditional mode

For seamless on-boarding of legacy applications:

- From TUI to Web with high compatibility and no code changes.

Infrastructure & Security

Security feature provided in the language to compress & encode:

- **Crypto API**
- **Zip/Deflate API**

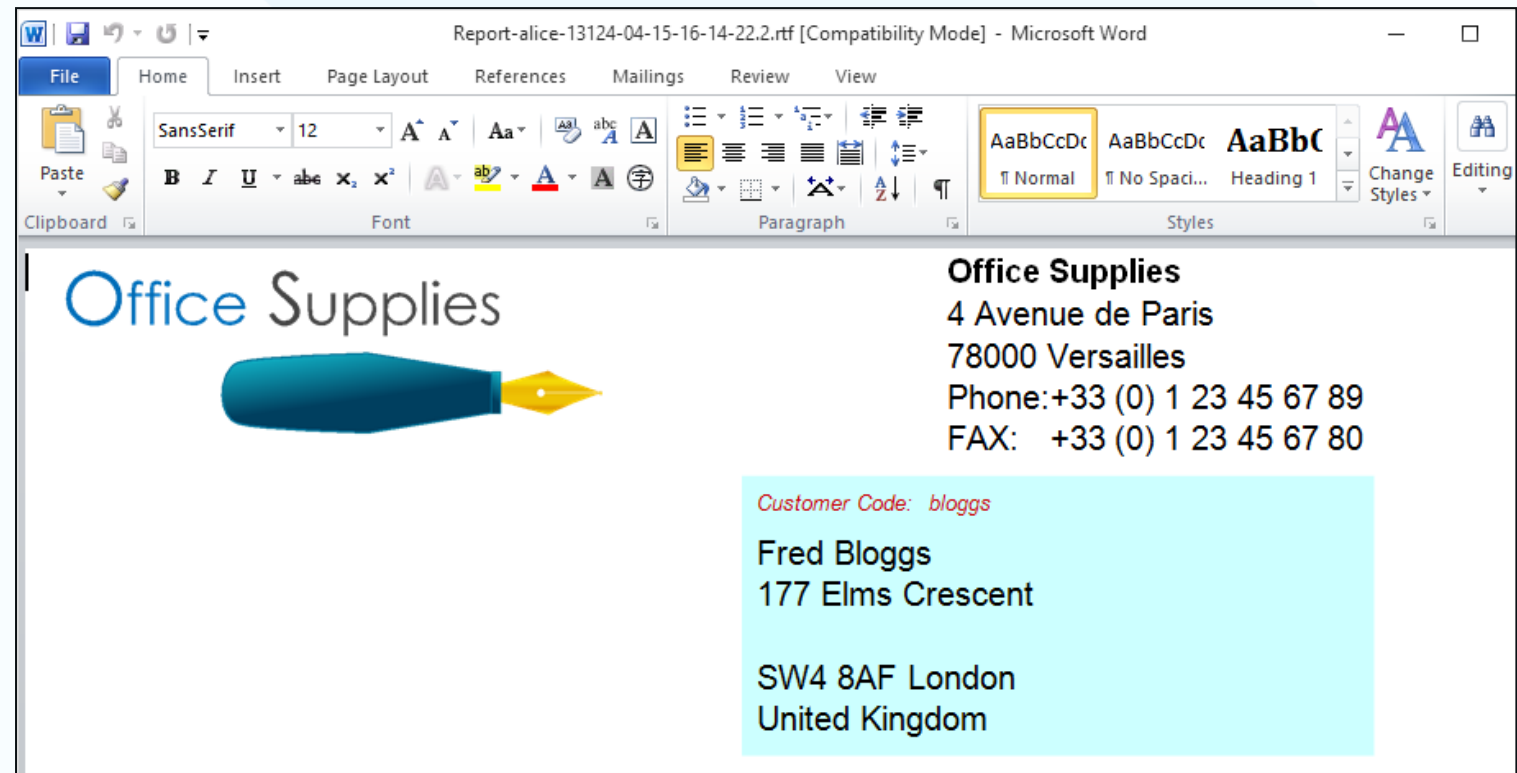

Code quality and security (**SAST**)

- Linter for Static Code Analysis to detect risky, obsolete code or non-standard code
- Integration with third-party tools (SonarQube)

Reporting

High-level HTML/Word output

- Produce editable Word documents
- Produce well structured HTML documents

Reporting SaaS Designer

Online designer to customize the design of reports

- Change visual aspect
- Create multiple rendering for a data source

The screenshot displays the Reporting SaaS Designer interface. At the top, there is a toolbar with various icons for editing, including text, images, tables, and charts. Below the toolbar, the main workspace shows a report design for an invoice. The report is titled "Invoice" and features the K-Software Co., Ltd. logo. The invoice details include the account number, invoice ID, status, date, and due date. The billing information is provided for K-Software, including the address, phone number, email, and website. The report also includes a table with columns for Item ID, Description, Quantity, Unit Price, and Line Total. The table is currently empty, with placeholder text for the first row. The report design is shown in a preview mode, with a red border around the content area.
